	Jordan M. Schwartz	2873					
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1) Responsive to communication(s) filed on							
,	action is non-final.						
3) Since this application is in condition for allowar	ce except for formal matters, pro	secution as to the merits is					
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.							
Disposition of Claims							
4)⊠ Claim(s) 1 is/are pending in the application.

## **DETAILED ACTION**

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Legerton et al patent number 5,662,706.

Legerton et al reads on this claim by disclosing the limitations therein including the following: an apparatus comprising a lens-shaped body (abstract); comprising first and second regions (Figure 1 re the center aperture region as the first region and the annular mask region as the second region); the second region having a lower light transmission then the first region (Figure 1, column 2, line 58 re a center aperture will transmit more light then the annular mask region); a portion of the second region configured to reduce a retinal distortion (column 2, line 64). Specifically, Legerton discloses the aperture sized to reduce distortions which would inherently include retinal distortion since the imaging is occurring on the eye retina. Furthermore, since the aperture size is inherently determined by the structure of the mask then if the aperture is sized to reduce distortions, the mask will inherently be configured to reduce the distortions.

Application/Control Number: 10/736,716

Art Unit: 2873

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hoffman patent number 5,617,154.

Hoffman reads on this claim by disclosing the limitations therein including the following: an apparatus comprising a lens-shaped body (abstract); comprising first and second regions (Figure 12, column 14, lines 19-67 re the outer peripheral portion of the lens as the first region and the central tinted portion as the second region); the second region having a lower light transmission then the first region (column 14, lines 19-67); a portion of the second region configured to reduce a retinal distortion (column 1, lines 15-52, column 14, line 52, column 15, line 15). Specifically, as stated in applicant's specification, retinal distortion may be due to retinal damage so therefore a lens that reduces retinal damage will inherently reduce retinal distortion. Hoffman discloses the central portion configured to reduce retinal damage (column 1, lines 15-52, column 14, line 52, column 15, line 15) so therefore the central region will inherently be configured to reduce retinal distortion.

#### **Prior art Citations**

Lipshitz publication number 2003/0187502, Maurer et al patent number 5,182,588, Chow et al patent number 2003/0028225, and Terry et al patent number 6,280,469 are being cited herein to show additional references that would have read on claim 1, however, such rejection would have been repetitive.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jordan M. Schwartz whose telephone number is (571) 272-2337. The examiner can normally be reached on Monday to Friday (8:00-5:30), alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Georgia Y. Epps can be reached at (571) 272-2328. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
